1. Intro
2. Microsoft Project Online End-of-Life
3. ServiceNow SPM Overview
4. Demo
5. Q&A

# Introductions

**Jeff Butler**

General Manager, Canada  
Ondaro

**Kevin O'Brien**

Dir, Pri Sec Port/Prin Bus Con  
Ondaro

**Claudia Lee**

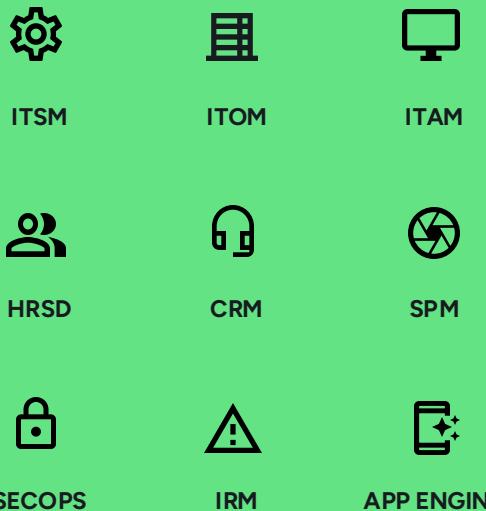

Advisory Solution Consultant –  
Strategic Portfolio Management  
ServiceNow

**David McPherson**

Senior Solution Sales Executive –  
Strategic Portfolio Management  
ServiceNow

# Ondaro is the only pure play ServiceNow partner with fully certified resources across the platform

## ENVISION

Business Transformation  
Organizational Change Management  
AI-Readiness  
Platform Strategy & Governance

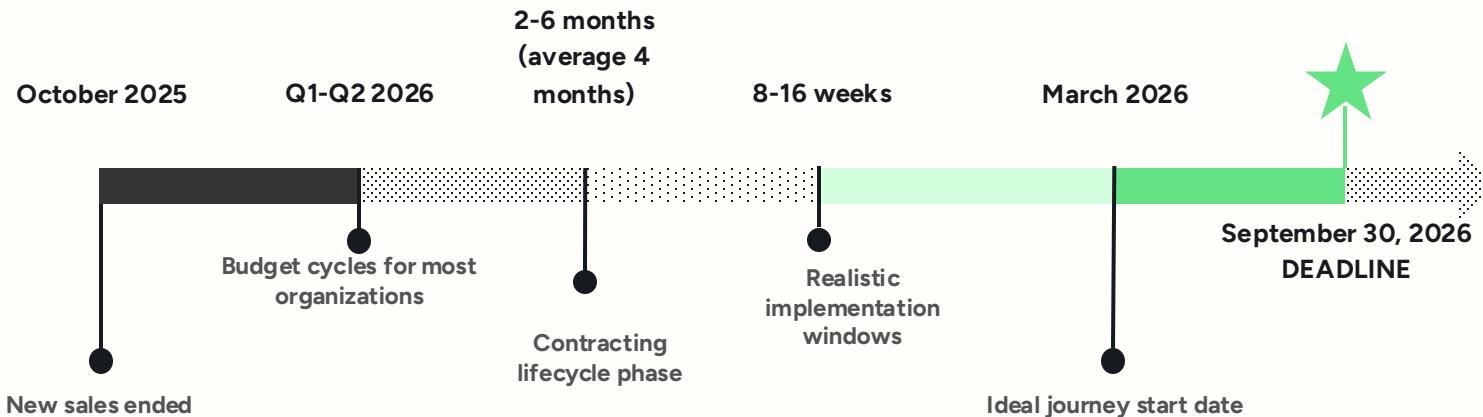

## IMPLEMENT & DEVELOP

Platform Architecture & Engineering  
Product Implementation  
UX & UI Design  
App Development  
Data Management & Integrations

## MANAGE & OPTIMIZE

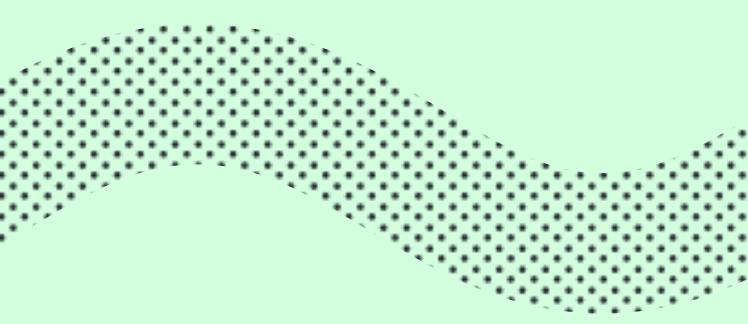

Platform Operations  
Enhancement Services  
Product Management

# CALL TO ACTION: Microsoft Project Online End-of-Life

## What happens if you do nothing:

Data loss scenarios, operational disruption, compressed timelines forcing poor decisions

- Portfolio rollup and visibility
- Resource management depth
- Enterprise governance and compliance
- Integration with existing workflows
- Scalability as complexity grows

# What Should Matter to a PMO Leader?

# What Should Matter When Evaluating Alternatives?

Decision criteria for PMO leaders facing Project Online retirement

## Portfolio Visibility

Rollup across projects, portfolios, and strategic initiatives

## Enterprise Governance

Compliance, audit trails, and standardized processes

## Methodology Flexibility

Support for waterfall, agile, and hybrid approaches

## Resource Management

Capacity planning across all work types, not just projects

## Workflow Integration

Connect projects to ITSM, ITOM, and operational systems

## Scalability

Grow from departmental to enterprise without re-platforming

## QUESTIONS PMO LEADERS NEED TO ASK

How are we planning to address the Project Online retirement deadline?

What visibility do we have into resource capacity across projects and operations?

How do we connect strategic objectives to the work being delivered?

How much time does our PMO spend consolidating data from multiple systems?

# Microsoft's Recommended Paths – And Their Gaps

Neither option addresses enterprise strategic portfolio management needs

## Planner Premium

### CAPABILITY GAPS

Rebranded from "Project for the Web" – Microsoft's cloud-forward solution with modern UI and Copilot AI integration.

#### ENTERPRISE PMO GAPS:

- X No enterprise resource planning or capacity management
- X Limited financial management – no budgeting or ROI tracking
- X Basic portfolio views – no strategic alignment tools
- X No ITSM/ITOM integration capability

## Project Server SE

### INFRASTRUCTURE BURDEN

On-premises/Azure-hosted option maintaining familiar capabilities but requiring significant infrastructure investment.

#### MODERNIZATION GAPS:

- X Requires SharePoint Server + SQL infrastructure
- X No AI capabilities – legacy architecture
- X Security/compatibility updates only – no innovation
- X Siloed from enterprise operations

**The Strategic Gap:** Neither Microsoft option connects project execution with broader enterprise operations, IT service management, or digital transformation initiatives – creating significant opportunity to modernize, not just migrate.

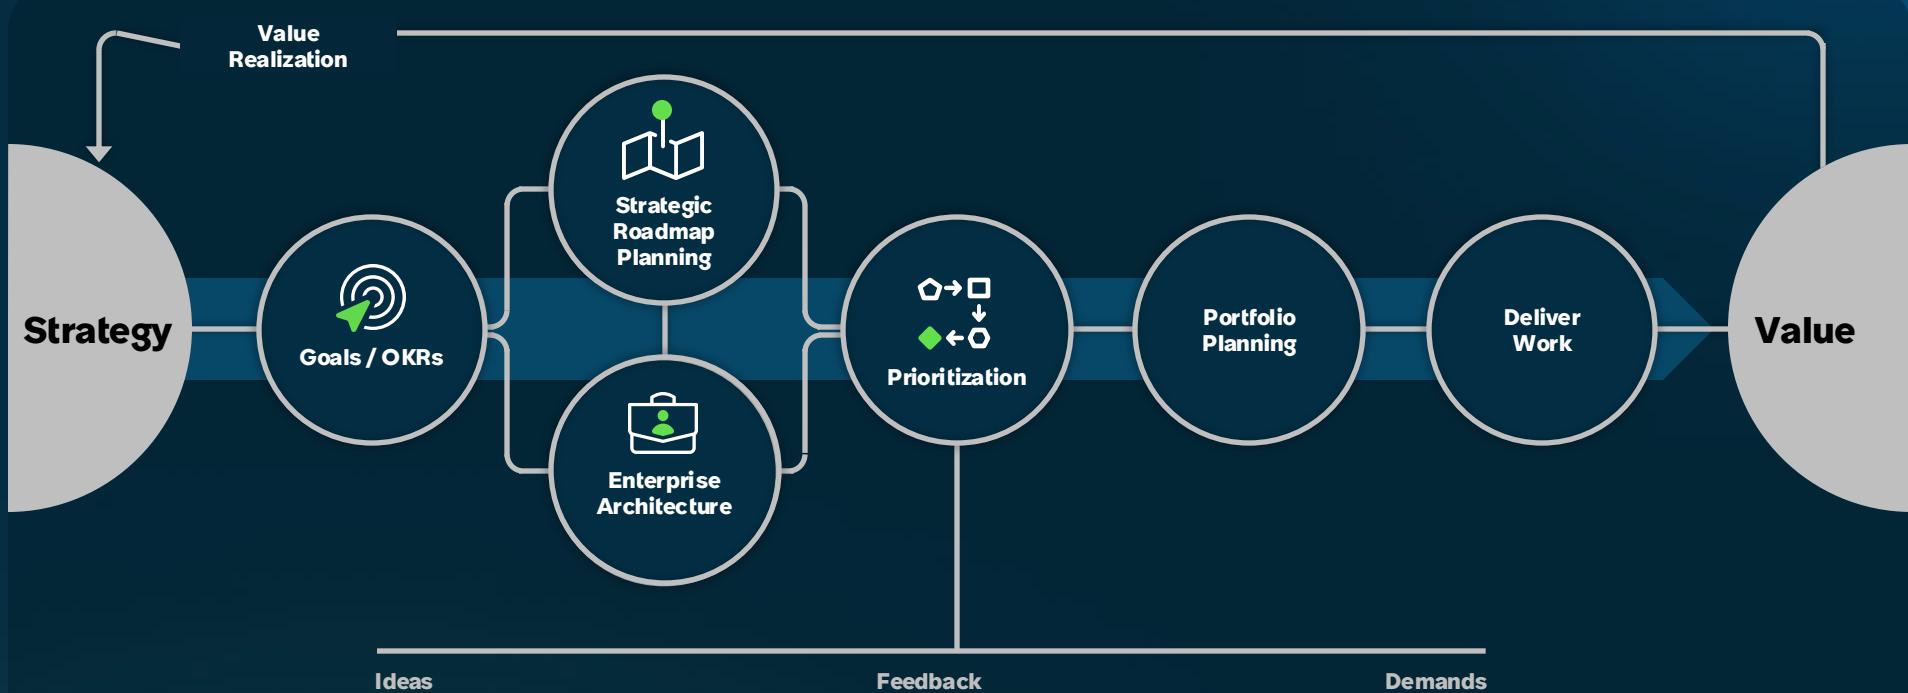

## AUDIENCE POLL

What other platforms were you considering to replace Microsoft Project Online?

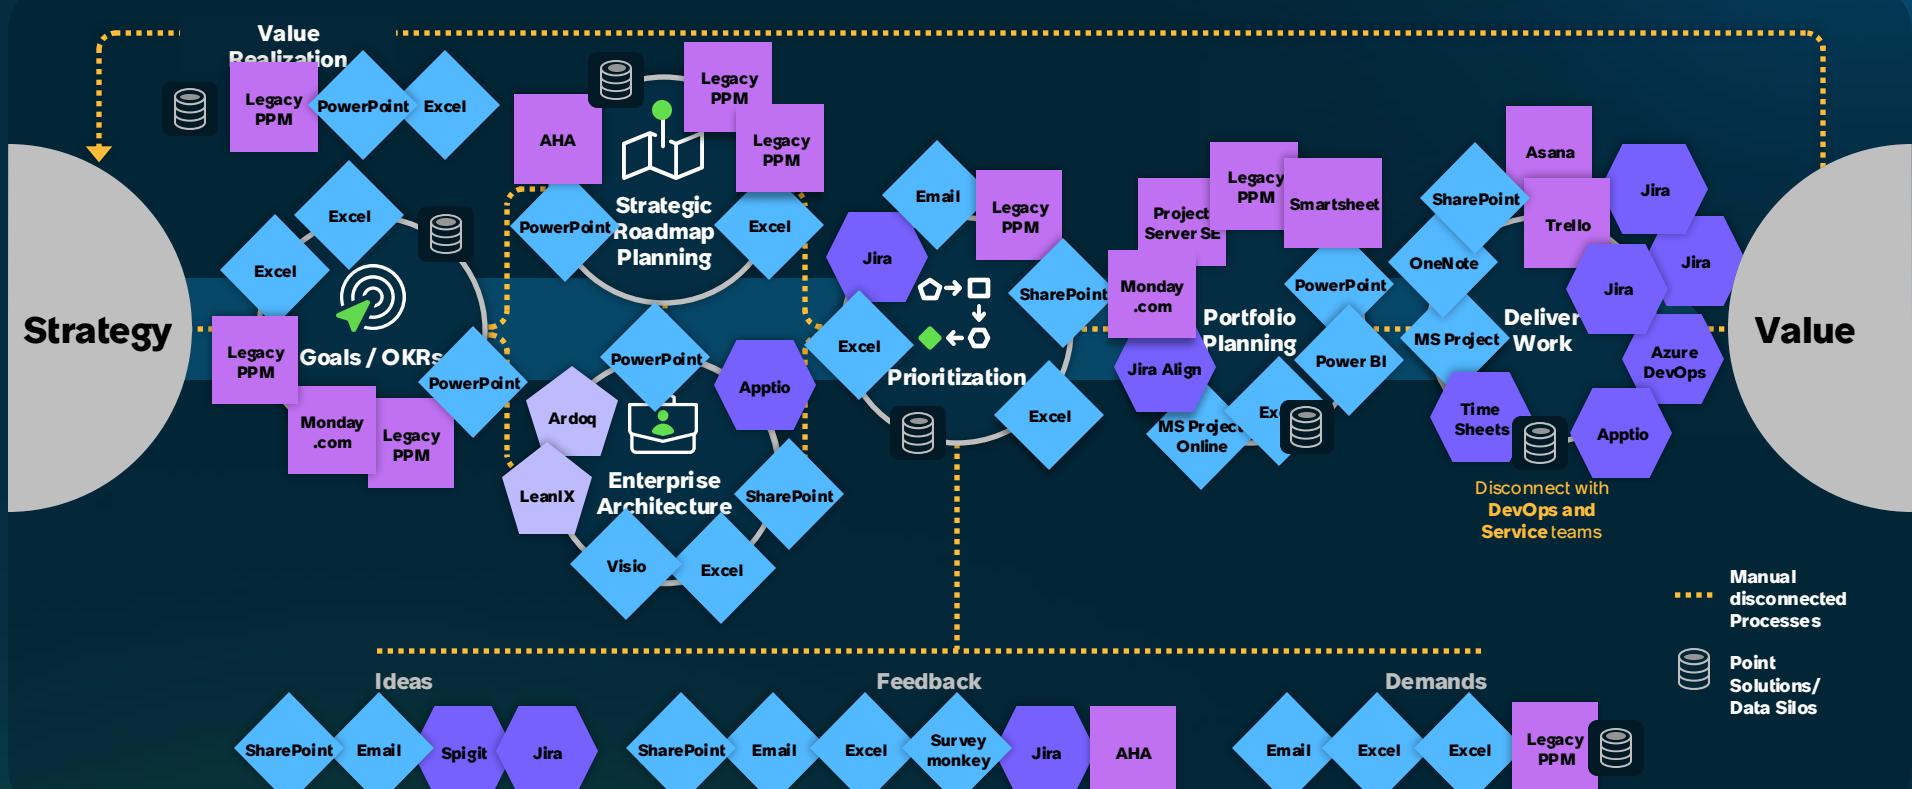

Share your answers in the chat!

# Strategic Portfolio Management Overview

# Siloed complexity impacting value realization

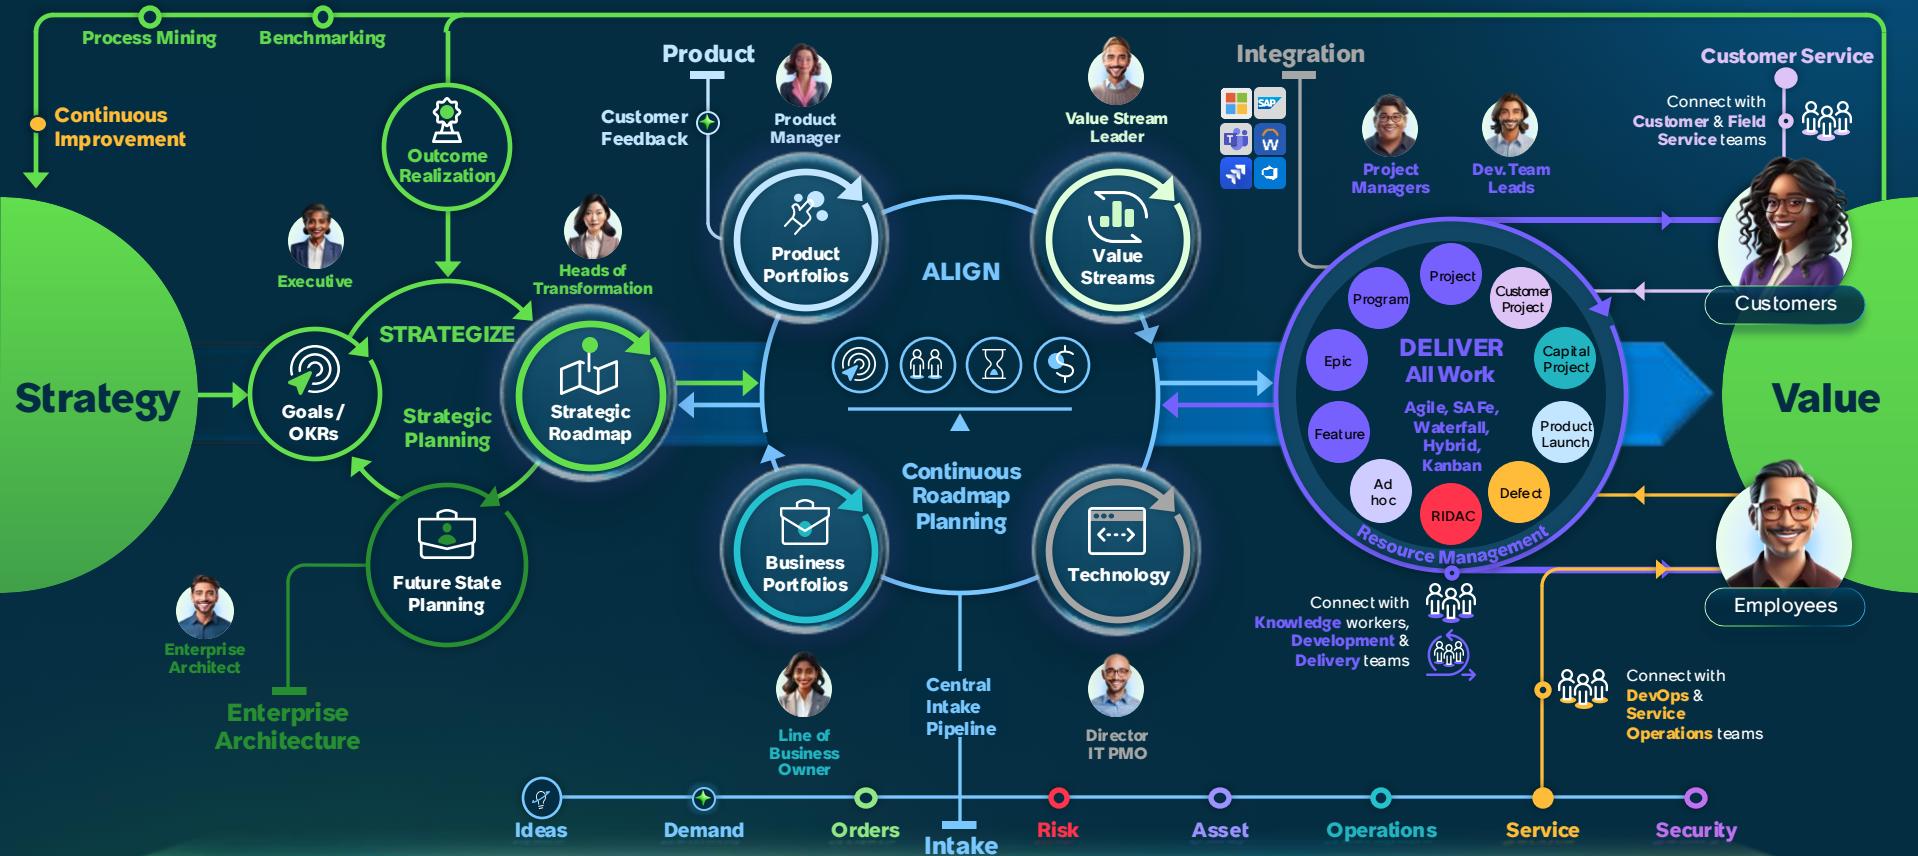

# Siloed complexity impacting value realization

# End-to-end visibility and insight

Strategy Plan Deliver Run Service  
Value

servicenow® AI Platform

# Why ServiceNow SPM Fills the Gap

Enterprise-grade strategic portfolio management with native AI and platform integration

## Single Platform for All Work

Visibility into projects, agile work, incidents, changes, and service requests – complete picture of organizational capacity

## Strategy-to-Execution

OKR framework and Strategic Planning Workspace – link work directly to strategic outcomes

## Native AI with Now Assist

Predictive project health signals, intelligent resource recommendations, and automated risk identification

## Enterprise Integration

Native connection with ITSM, ITOM, HR – see how projects impact services and manage resources

## CAPABILITY COMPARISON

	Planner	Server SE	SPM
Strategic Alignment	Limited	Moderate	Strong
Resource Mgmt	Limited	Strong	Strong
AI Capabilities	Copilot	None	Now Assist
Platform Integration	M365	SharePoint	Full Stack
Work Visibility	Tasks	Projects	All Work
Future Investment	Active	Maintenance	Innovation

## ANALYST RECOGNITION

*"ServiceNow doubled down on its investment in SPM, and the results show."*

— The Forrester Wave™: Strategic Portfolio Management Tools, Q2 2024 (Leader)

# Why Transition to ServiceNow SPM?

## From Standalone to Strategic

### Unified Platform

Eliminate tool fragmentation. Projects, Service Management, Enterprise Architecture, Asset, and HR workflows on one platform—work items flow between them automatically without integrations to maintain

### Financial, Resource, and Portfolio Governance

Native portfolio financials, scenario planning, cost roll-ups, resource planning, and time tracking—no reconciling exports across Project Online, Power BI, and Excel

### Flexible Project Methodology Support

SPM supports waterfall, agile, and hybrid methodologies out of the box—manage traditional projects, scrum, and SAFe within a single platform without third-party tools

### Reduced Integration Burden

One platform, one data model—eliminate middleware, external Power BI dashboards, and manual data exports with native reporting built in

### Demand-to-Delivery Traceability

Connect the full lifecycle from demand intake through project execution to operational handoff in a single system

### Autonomous Enterprise Workflows

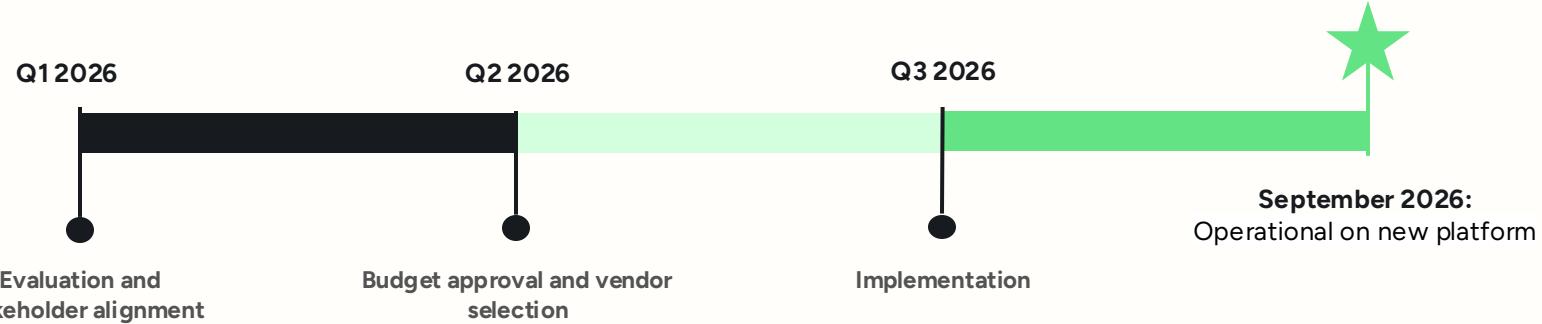

Now Assist and AI Agents automate approvals, surface risks, and take autonomous action across projects—intelligent automation built into the platform, not bolted on

Endaro

Implementation Reality

# Implementation with Ondaro

**Lightweight (Project-only):** 8-10 weeks, focused scope, rapid time-to-value

**Standard PMO:** 12-14 weeks, full capability deployment, phased approach available

## What the journey looks like:

Discovery → Configuration → Migration → Enablement → Go-Live

- **Data migration:** Address the elephant in the room—how existing Project Online data transitions, considerations, and the challenges.
- **Legacy process:** an opportunity to look at your legacy processes.
- **Ondaro implementation methodology:** Partner credibility on delivery certainty

## Questions to ask/action to take:

- Who needs to be involved?
- What's your budget?
- How long does approval take?
- Write and publish the RFP
- Gather team to review potential partners
